

THE TAMIS CORPORATION

TAMIS MODULAR VEHICLE MITIGATION SYSTEM

A modular, rapidly deployable vehicle barrier for any special event that needs protection.

The **Tamis Modular Vehicle Mitigation System** and mobile barriers are a lightweight, unique and mobile solution designed to protect people, places and things against hostile, intentional or inadvertent vehicle ramming or terror attacks.

These mobile barriers can be setup in a matter of minutes by one person and do not require any tools to configure them. They are the only crash certified mobile solution crash tested with the wheels on the barrier. The integrated wheels on each barrier allows for emergency vehicle access, should the need arise.

The **TMVMS** is a modular system, meaning the barriers can connect to each other to provide unlimited protected coverage.

Optional **barrier trailer kits** are available!

Barrier Options
